

Everyone knows that going Green can help the environment... Let Stewart Business Systems show you how it can help your business

Reduce your energy consumption with EA Toner and Xerox Energy Star Multi-Function Printers.

Decrease your operating costs and reduce waste with Xerox Solid Ink Technology.

Decrease your paper consumption by implementing electronic data management, scan to email, print-on-demand, and distribute-then-print workflows.

Improve your image by showing your customers that you are dedicated to environmental sustainability.

How Green is Your Office?

Visit >>>

1. **Use Less Paper** Make two-sided prints and copies; most Xerox equipment you can make this a default setting.

Print multiple images per page. Print on demand, creating documents only in the quantity and at the time needed.

The Environmental Protection Agency estimates it takes 10 times more energy to manufacture a piece of paper than to create a print or copy.

2. **Recycle The Paper You Use and Use Recycled Paper**

Install bins in several office locations to collect paper for recycling or for reuse. Purchase recycled paper – it can meet the same performance specifications as non-recycled paper.

3. **Reach For The Energy Star**

Upgrading old products with more-efficient ENERGY STAR products will save energy. These products automatically shut off / power down when not in use, significantly reducing electricity costs. Even more energy savings can be gained by shortening the idle time before the device enters sleep mode.

4. **Replace Stand-Alone Office Products With Multifunction Systems**

A copier, two printers and a fax machine can consume 1400kWh of energy each year. But, one multifunction system that performs all the same functions uses only 700kWh annually. If the multi-function system replaces products that are not ENERGY STAR qualified, energy savings can double.

5. **Scan and Send**

Paper can be easily shared electronically using scanning features built into office systems. Scan the document into your system and email to all the appropriate recipients. Keep a copy in your digital files.

By decreasing the need to fax or mail documents, scanning helps eliminate paper inventory, saves phone and postage charges, and reduces the environment impact of sending paper by air of ground transportation.

Solid Ink Printers eliminate cartridges altogether and generate about 90% less waste than a typical color laser printer. One example of innovative technology from Stewart Business Systems.

Reduce Overhead Expenses

If you had an expense that comprised 2% of your annual revenue and was growing faster than your top line revenue growth, you'd want to know about it, wouldn't you? And if you could find a practical way to manage this expense and maybe even save money, it would be a top priority.

What Are You Spending on Printing? Many companies are unaware of their true printing costs. Expensive printer cartridges are buried in office supply budgets and hide, unmanaged, in supply closets, but repair costs and hardware acquisitions often land in IT budgets.

Discover Your Total Cost of Ownership. Our PrinteGration program uses new discovery technology to help you understand the Total Cost of Ownership (TCO) of your printer fleet. We look at each of the printers on your network to determine the usage and operation costs for each device. Then, we present a comprehensive report on your current cost and how much you could save by switching to Print Management.

Manage Your Environment
We offer a usage-based billing model to help you manage your printing environment. One low cost-per-page includes printer

supply cartridges, preventative maintenance, and on site repair. All of your printing costs are on one invoice, allowing you to view and measure your savings. Learn more about how you could benefit from PrinteGration. Contact us today at (800) 322-5584
