Stewart Business Systems Opens Door to Affordable Digital Printing and Profitable Color Print Applications

Burlington, New Jersey, February 1, 2009 -- Xerox Corporation (NYSE: XRX) and Stewart Business Systems announced the release of their newest digital color press that packs robust production features such as coated paper handling, heavyweight media support, and feeding and finishing options at an entry-level price. The Xerox 700 Digital Color Press brings productivity, excellent print quality and flexibility to print providers and business looking to adopt digital technology or expand their digital printing businesses and internal publishing capabilities.

The Xerox 700 Digital Color Press prints at 70 pages per minute in color or black and white, and provides an affordable way to start building or expanding a digital printing business, especially for in-plant operations, quick printers, commercial printers, creative agencies, photo specialty retailers and departmental environments. The system has the image quality and productivity of a high-end production press and is ideal for photo books, brochures, direct-mail pieces, catalogs, calendars and postcards.

"The Xerox 700 Digital Color Press extends what is already the industry's broadest portfolio of digital color systems and fits a growing segment of the market inside our extensive customer base," said Joe O'Malley, President of Stewart Business Systems, A Xerox Company. "Print providers and businesses are demanding products, serviced by a reliable and experienced supplier, that produce vivid lucrative full-color applications. The Xerox 700 Digital Color along with the Xerox Docucolor 5000, 7000 and 8000 Press delivers with feature rich functionality at an affordable price."

As more businesses are benefitting from the quality and value of digital printing, the market for entry-level digital color presses continues to grow. According to the May 2008 IDC Hardcopy Peripheral Tracker, this market, defined as color devices of 41+ pages per minute, priced between \$20,000 and \$100,000, experienced 2007 year-over-year growth of 50 percent in the U.S. "The outpouring of interest in this product has already resulted in a pipeline of advanced orders" said Harry Hecht, General Manager of Stewart Business Systems, A Xerox Company. "We have a fully configured Xerox 700 in our Corporate Technology Center and the traffic to see it has been brisk. We are extremely pleased and excited about this product"

The Xerox 700 Digital Color Press uses a proprietary low-melt EA Toner that prints full color at fast speeds with matte finish image quality. EA Toner is Xerox's patented chemically-grown toner; its miniscule particles help ensure high-quality halftones, smooth transitions and rich shadow detail. This environmentally-friendly, low-melt EA Toner requires less energy to manufacture and print, minimizing the impact on the environment.

The press prints on coated and uncoated paper with a maximum sheet size of 13" x 19.2" and a wide media latitude between 64 gsm and 300 gsm (16 lb. bond up to 110 lb. cover). It offers automatic two-sided printing up to 220 gsm (80 lb. cover) on both coated and uncoated stocks. The device boasts image quality at 2400 x 2400 x 1 dots per inch and tight front-to-back registration of +/- 1.0mm.

A number of additional options enable customers to tailor the Xerox 700 Digital Color Press to meet the exact needs of their print operation. Customers can select the CX Print Server powered by Creo, the EX Print Server powered by Fiery, Integrated Fiery Color Server, EFI Splash RPX-iii Software or Xerox FreeFlow™ Print Server which for the first time is being offered in standard or professional editions. The device will also have a number of finishing options, including an Advanced Finisher, Professional Finisher, Light Production C Finisher and High-Capacity Stacker. These give customers the ability to customize their presses with several configurations and options for stapling, stacking, folding and booklet making on coated or uncoated papers. A variety of feeding options also provide the ability to tailor

The new digital press exemplifies Stewart Business Systems and Xerox's emphasis on innovation, sustainability and a commitment to delivering the right technology, workflow, and business model to customers right now and in the future.
